

# arregulo

The smart rules factory –  
A flexible and powerful framework for  
agile software solutions.

# The smart rules factory

**arregulo is the smart framework that forms the basis of all our standard and customised software applications. arregulo includes all components required to quickly create a rule-based software solution that is easily adapted to new requirements.**

## Fields of application

arregulo can automate any rule-based process.

**Examples include, but are not limited to:**

- Customer relationship management
- Purchase and sales management
- Contract management
- Logistics and data management
- Risk management
- Workflow management

## Your benefits

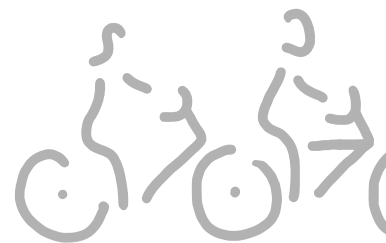

Across business fields and areas of responsibility arregulo performs convincingly.

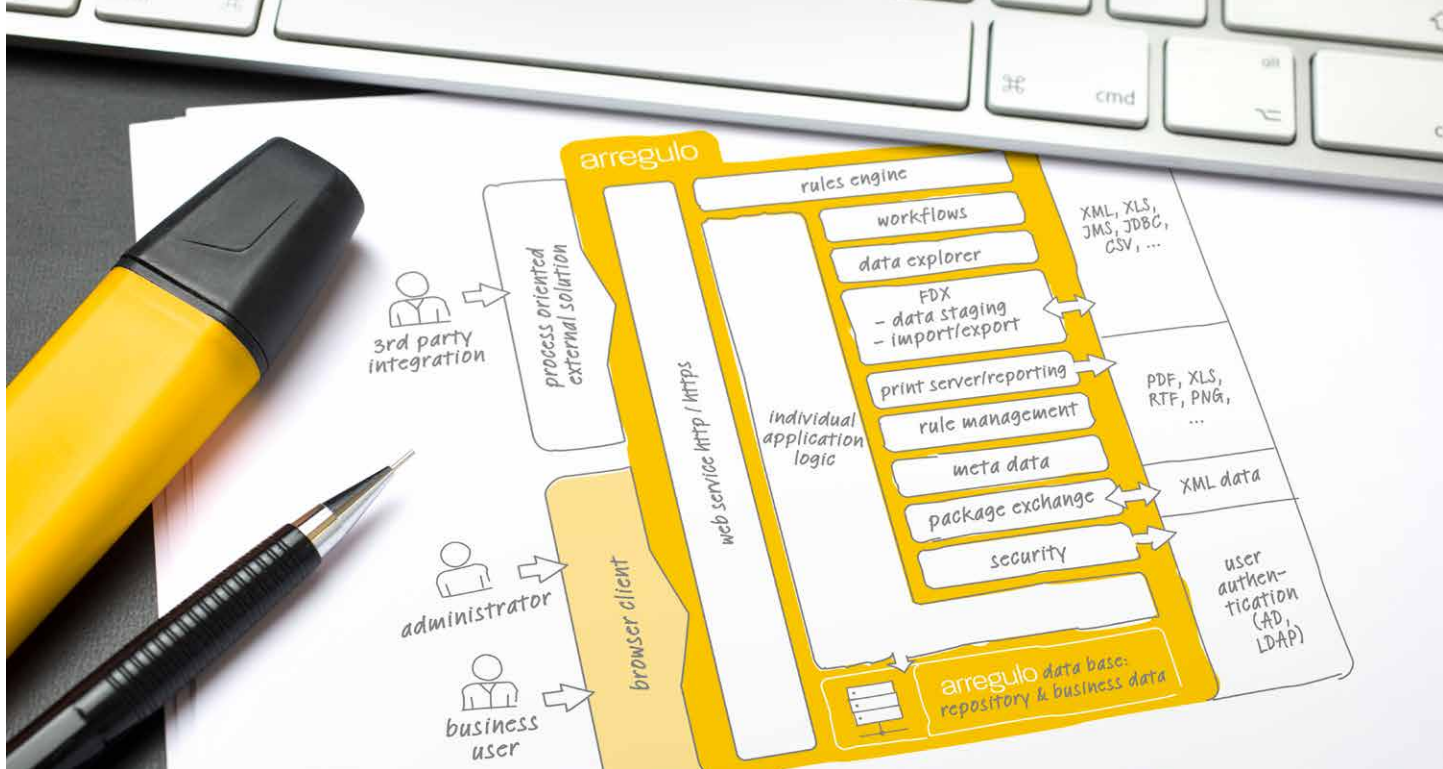

- arregulo's precision, agility and speed to implementation can lead to a significant competitive advantage.
- arregulo takes the pressure off your people because it centralises and accelerates rule-based processes, saving costs and reducing the risk of human error.

Agility sets arregulo-powered solutions apart.

---

arregulo architecture

## How does arregulo help me achieve this?

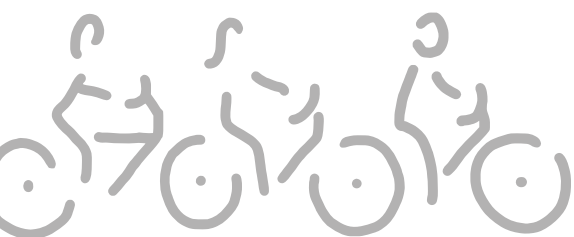

**Precision** – arregulo automates and streamlines manual processes and simplifies process management through user-friendly dashboards. In addition, arregulo reduces the likelihood of errors, by identifying data quality issues early on.

**Agility** – arregulo is so easy to use that even business experts without programming skills can adapt rules to new requirements.

**Speed to implementation** – simulations and the ability to conduct what-if analyses mean you don't need to install time consuming test environments.

The following modules are used as a starting point to build a solution to meet your specific requirements:

- Data integration
- Workflow management
- Business activity monitoring
- Extendible data model
- Documentation of changes to attributes
- Integrated Reporting Suite
- User- and role-based authorisations concept

*“ Thanks to Business-Rules technology, individual applications can be quickly adapted to new requirements.”*

## What functionalities does arregulo provide?

**Process management** customised to meet your requirements.

**Data management:** Automation of data import and export, as well as data preparation, validation, integration, documentation and processing.

**Reporting and analysis:** arregulo's built-in report designer and graphic analysis function enable you to create, adapt and export reports with ease.

**Rules management:** All rules are verifiable and traceable, as they are saved in the central rules archive.

**Traceability:** Configurable documentation and evaluation of all changes.

**Security:** Role-based access control and authorisation down to field level. Single or multi-level configurable approvals processes and escalation mechanisms.

**Intuitive and flexible user interface**

**System compatibility:** arregulo's interfaces are open and can be easily adapted to your requirements. All major databases and data types are supported. Integrates seamlessly with existing groupware environments.

**System specifications:** The RETE-algorithm-based Rule-Engine ensures outstanding performance even when processing large data volumes. Based on state-of-the-art technologies, including business rules, Java Application Server .NET and GUI.

Your individual solution made  
by Sowatec - exactly tailored  
to your needs

## Sowatec offers agile software solutions – that meet the sophisticated needs of financial services and business services companies.

**We understand the worlds and priorities of financial services  
industry professionals and qualified IT specialists.**

Our 360° service encompasses everything you need for your software solution – design, development, configuration, commissioning and support for its ongoing operation.
